Preliminary Edition

General

The SC8-FLUTE is a low power CompactPCI® Serial CPU board, based on an Intel® Atom™ x6000RE (Elkhart Lake Industrial) System-on-Chip processor. The front panel is provided with three 2.5Gbps RJ45 Ethernet jacks, and three Type-C USB3/DisplayPort connectors. The board is equipped with 16GB directly soldered DDR4 IBECC RAM, and in addition a DDR4 SODIMM socket for another 16GB.

High speed PCIe® x4 SSD mass storage is available via low profile mezzanine modules (4HP assembly), or multi-function side cards (8HP). The SC8-FLUTE backplane connectors comply with the CompactPCI® Serial system board specification, suitable for reasonable system expansion via 3 x PCIe®, 4 x SATA (two ports configurable as hardware RAID 0/1), and USB3.

CompactPCI® Serial

While mechanically compliant to CompactPCI® Classic, CompactPCI® Serial defines a superior card slot, based on PCI Express®, SATA, GbE and USB data lines. A passive backplane is used for high speed signal distribution from the system slot to peripheral card slots.

Most CompactPCI® Serial peripheral cards require only the backplane connector P1, which comprises PCIe® and other signals, resulting in a concise and inexpensive peripheral board design. For optional Gigabit Ethernet backplane communication the connector P6 will be required.
